

Claims

- [c1] 1. A cable guide for a control cable extending between an actuator and a suspension system having a crown connecting two parallel tubular bodies to a steerer tube, said cable guide comprising:
a housing formed on an outer surface of crown, the housing having a bore extending therethrough for receiving the control cable.
- [c2] 2. The cable guide of claim 1 wherein the suspension system further comprises a spool for winding and unwinding the control cable disposed on one end of one of the tubular bodies for winding and unwinding the control cable, the housing configured such that a portion of the control cable extending between the housing and the spool lies substantially in a plane of the spool.
- [c3] 3. The cable guide of claim 2 wherein the control cable includes an inner wire encased in an outer casing, the housing having a radially extending flange for engaging the outer casing while permitting the inner wire to extend through the bore.
- [c4] 4. The cable guide of claim 1 wherein the housing is

forged with the crown.
